

Natrol Melatonin 5mg - Health Fact Sheet

PRODUCT OVERVIEW

Natrol Melatonin 5mg Time Release tablets provide a controlled release of melatonin over several hours, mimicking the body's natural melatonin secretion pattern to support healthy sleep onset and duration.

SERVING SIZE: 1 tablet 30 minutes before bedtime

NUTRITIONAL PROFILE PER SERVING

Melatonin: 5mg

Calcium (as Dicalcium Phosphate): 40mg / 3% DV

Time-Release Matrix: Hydroxypropyl Methylcellulose

KEY INGREDIENT AND BENEFITS

Melatonin - 5mg (Time Release)

Melatonin is a hormone naturally produced by the pineal gland in response to darkness. It is the primary regulator of the body's circadian rhythm (internal clock).

SLEEP ONSET

Melatonin signals to the brain that it is time to sleep. Exogenous melatonin supplementation reduces sleep onset latency (time to fall asleep) by an average of 7 minutes in meta-analyses, with greater effects in those with delayed sleep phase.

SLEEP DURATION AND QUALITY

The time-release formulation provides:

- Immediate release component: helps initiate sleep
- Sustained release component: maintains melatonin levels through the night
- Supports deeper, more restorative sleep stages
- Reduces nighttime awakenings

CIRCADIAN RHYTHM REGULATION

Particularly effective for:

- Jet lag: advance or delay the sleep phase to match new time zone
- Shift work: help reset the body clock for non-traditional work schedules
- Delayed Sleep Phase Disorder: advance sleep timing in night owls
- Blind individuals who lack light cues for circadian entrainment

ANTIOXIDANT PROPERTIES

Melatonin is a potent antioxidant and free radical scavenger. Crosses the blood-brain barrier and mitochondrial membranes. Provides neuroprotective effects against oxidative stress. May have implications for age-related neurological conditions.

IMMUNE MODULATION

Melatonin receptors present on immune cells. Enhances natural killer cell activity. Modulates cytokine production. May support immune function during periods of sleep disruption.

DOSING CONSIDERATIONS

5mg Dose Rationale:

- Physiological nighttime melatonin levels: 0.1-0.3mg
- Pharmacological doses (1-10mg) commonly studied
- 5mg provides reliable sleep-initiation and maintenance effects
- Higher doses do not necessarily produce stronger effects
- Start with lower dose (0.5-1mg) if sensitive

TIME RELEASE ADVANTAGE

Immediate-release melatonin peaks in blood within 30-60 minutes and clears within 3-5 hours.

The time-release matrix extends this to 6-8 hours, better matching the natural nocturnal melatonin profile and reducing early morning awakening.

POPULATIONS WHO BENEFIT MOST

- Adults over 55 (natural melatonin production declines with age)
- Frequent travelers crossing time zones
- Shift workers
- Individuals with insomnia or delayed sleep phase
- Those reducing benzodiazepine or sleep medication dependence

FORMULATION NOTES

- Vegetarian tablet
- 100% drug-free
- No habit-forming
- Non-GMO
- Gluten free

ALLERGEN INFORMATION

Free from major allergens. Manufactured in a GMP-certified facility.

RECOMMENDED USE

Take 1 tablet 30 minutes before bedtime. Do not exceed recommended dose. Not intended for use by children. Consult a healthcare provider if pregnant, nursing, or taking medications.

DRUG INTERACTIONS

May interact with blood thinners, immunosuppressants, diabetes medications, and contraceptives. Consult a healthcare provider before use if taking prescription medications.

STORAGE

Store at room temperature in a cool, dry place. Keep out of reach of children.
