

Sports Research Vitamin D3 + K2 - Health Fact Sheet

PRODUCT OVERVIEW

Sports Research Vitamin D3 + K2 combines two essential fat-soluble vitamins in a synergistic formula. Vitamin D3 (cholecalciferol) is paired with Vitamin K2 (as MK-7, the most bioavailable form) to optimize calcium utilization and support bone and cardiovascular health.

SERVING SIZE: 1 softgel daily with a meal containing fat

NUTRITIONAL PROFILE PER SERVING

Vitamin D3 (as Cholecalciferol): 5000 IU (125 mcg) / 625% DV

Vitamin K2 (as MK-7 from Natto): 100 mcg / 83% DV

Organic Extra Virgin Coconut Oil: 270mg (carrier for fat-soluble absorption)

KEY NUTRIENTS AND BENEFITS

Vitamin D3 - 5000 IU

The most bioavailable and biologically active form of vitamin D. Produced naturally in skin upon sun exposure.

Bone Health: Increases intestinal calcium absorption by 30-40%. Regulates calcium and phosphorus metabolism for bone mineralization.

Immune Function: Activates immune cells including T-cells and macrophages. Deficiency linked to increased susceptibility to infections.

Muscle Function: Required for normal muscle contraction and strength. Deficiency associated with muscle weakness and falls in elderly.

Mood and Mental Health: Vitamin D receptors present throughout the brain. Low levels strongly associated with depression and seasonal affective disorder.

Cardiovascular Health: Supports healthy blood pressure and reduces arterial stiffness.

Cancer Prevention Research: Epidemiological studies suggest adequate D3 levels associated with reduced risk of colon, breast, and prostate cancers.

Vitamin K2 (MK-7) - 100 mcg

MK-7 (menaquinone-7) derived from fermented natto soybeans. Has a half-life of 72 hours vs. 1-2 hours for K1, ensuring sustained activity.

Bone Health Synergy with D3: Activates osteocalcin, the protein that binds calcium into bone matrix. Without K2, calcium mobilized by D3 may deposit in soft tissues rather than bones.

Cardiovascular Protection: Activates Matrix Gla Protein (MGP), which prevents calcium from depositing in arterial walls. Reduces arterial calcification and stiffness. Studies show K2 supplementation significantly reduces cardiovascular mortality.

WHY COMBINE D3 AND K2?

Vitamin D3 increases calcium absorption from the gut. Vitamin K2 directs that calcium to bones and teeth rather than arteries and soft tissues. Together they work synergistically — D3 without K2 may inadvertently increase cardiovascular calcification risk.

ORGANIC COCONUT OIL BASE

Fat-soluble vitamins require dietary fat for absorption. The organic extra virgin coconut oil base ensures optimal bioavailability without needing to take with a fatty meal.

FORMULATION NOTES

- Non-GMO verified
- Gluten free
- No artificial additives
- Third-party tested for purity

ALLERGEN INFORMATION

Contains coconut (tree nut). K2 derived from soy (natto). May not be suitable for those with soy or tree nut allergies.

RECOMMENDED USE

Take 1 softgel daily with a meal. Due to the 5000 IU dose of D3, long-term use at this level should be monitored with periodic blood testing (25-OH Vitamin D levels).

STORAGE

Store in a cool, dry place away from heat and direct sunlight.
